

Leaders in Separation Technology

8400 Series

Screen Separators

Standard features of the Two-screen 8400 Series include:

The Forsberg Screen Separators are of the four-bearing type, as shown at the right. By incorporating outboard bearings mounted in an isolation mount and inboard bearings mounted on screener body, a positive eccentricity motion is achieved regardless of load on the screen.

The outboard bearing isolation mounts, combined with the unique balancing system, make the frame virtually vibration-free.

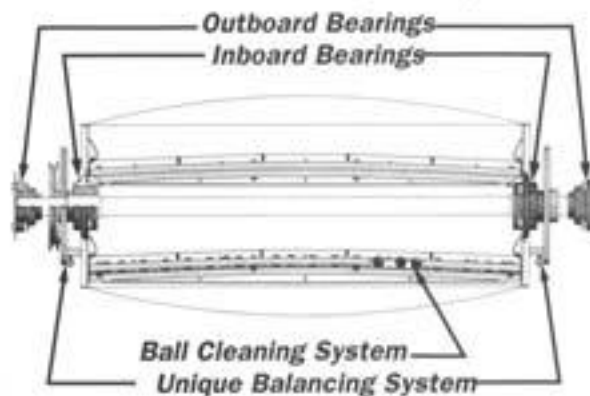

The screen support grid requires no hold-downs, thus allowing each screen to be easily changed.

The ball compartments are incorporated into the screen support grid for addition of ball cleaners, if required.

Positive Eccentricity Under Load

Free product evaluation in our testing facility is available to ensure complete customer satisfaction prior to purchase.

AVAILABLE SIZES

Screen Size	Horse Power
34" x 84"	3
46" x 84"	3
60" x 84"	3

Also available with pre-scalp, pre-air and post aspiration.

Leaders in Separation Technology

4800 Series Screen Separators

Standard features of the Two-screen 4800 Series include:

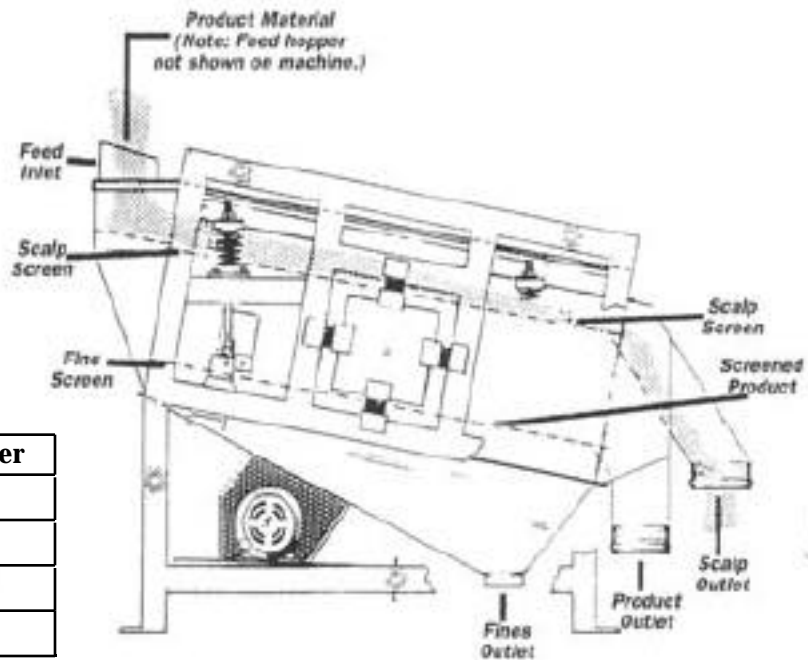

Advanced balancing system makes the frame virtually vibration free.

Easy screen removal! Either screen can be changed without loosening the adjacent one.

The ball compartments are incorporated into the screen support grid for addition of ball cleaners, if required.

Adjustable feed hopper assures consistent supply of product onto the screener. By maintaining proper feed, you achieve the best separation possible.

Optional stainless steel construction.

AVAILABLE SIZES

Screen Size	Horse Power
18" x 48"	2
34" x 48"	2
46" x 48"	2
60" x 48"	2
