AUTO TAG PLACER

Shown with ESP 996 pedestal, Union Special 80800C industrial sewing head and Newlong CM4900-1 power in-feed

The AUTO TAG PLACER automatically places tags from roll stock, on sewn bags, at a rate of 30 bags per minute. This compact simple design requires almost no maintenance.

Automatic tag placement eliminates manual placement entirely, thus reducing carpal tunnel injuries.

Roll stock tags are far easier to store and use than individual tags and there is virtually no waste. With individual tags, operators place multiple tags on a bag and tags are routinely dropped on the floor.

The ATP-30 must be interfaced with a power in-feed device.

Roll stock tags

Perforated tags being separated prior to insertion on bags
