

Series F Conveyor

The Rapat Series F Conveyor is a rubber belt conveyor designed for gentle handling of bulk materials such as seed, beans, fertilizer, ear corn, etc. The conveyor can elevate up to a 40 degree incline. The rubber flights are hot vulcanized to the rubber belt and convey the materials without cracking or grinding.

The Rapat Series F Conveyor is versatile! Installation options range from wheel undercarriages to permanent leg assemblies for specialized uses. It is easy to move and clean. Formed steel covers provide sun and wind protection for your products.

The 18" belt will handle approximately 2,500 BPH. The 24" belt will handle approximately 3,500 BPH.

Lengths	20' to 70' in 10' increments	
Belt	18" or 24" width with 2" high molded cleats on 12" centers	
Drive	Positive gearbox and shaft drive with roller chain final drive.	
Frame	Formed and welded steel frame with self-cleaning bed and inclined sides to form trough.	
Power	Conveyor can be driven by electric or hydraulic motor, gas engine, or PTO.	
Undercarriage	Heavy-duty undercarriage complete with manual winch, removable towing hitch, and rims and tires.	
Pulleys	8" diameter machined head pulley with vulcanized lagging and drum type tail pulley.	
Covers	Removable steel covers with inlet hopper and discharge spout standard.
