

# Teflon Coating

Benefits

**NAVCO®** offers a unique Teflon Coating option to extend the life of the vibrator for most models.

In very harsh work environments where vibrators are often exposed to dust or dirt, receive contaminated air or see poor lubrication, the useful life of the vibrator is increased when it is Teflon coated.

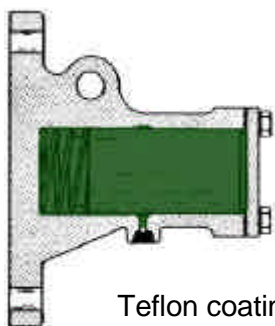

The standard Teflon option includes a coated bore and piston. For special applications the outside of the vibrator can also be coated.

All Hopper Car Portable Vibrators now come standard with Teflon Coating.

## Benefits of Teflon Coating:

- Teflon coated surfaces are more forgiving of contaminated air.
- Teflon is resistant to corrosion and oxidation.
- Teflon provides additional lubricating properties.
- Teflon coating is recommended for food applications where lubrication is discouraged.
- Teflon coating extends the service life of the vibrator.

Teflon coating on interior surfaces of vibrator

NAVCO offers Teflon Coating as an option for BH Vibrators, as they may or may not see harsh conditions.

Teflon coating is available in piston vibrator sizes 1" through 5" and on all HCP model rail car vibrators.

The portable Magnevibe is offered with Teflon coating inside and out as well, at no additional cost.

## Less Wear, Longer Life
