

AUTOMATIC PNEUMATIC TIMERS

NAVCO® APT Timers are available in 1/2" and 3/4" sizes to adapt to a wide range of applications.

Many materials respond to intermittent vibration better than continuous. For this reason, **NAVCO®** offers the APT Automatic Pneumatic Timer to cycle vibrators on and off. This unit is especially suited for hazardous environments.

The **NAVCO®** APT Unit needs no electrical connections. It is totally air controlled and has a variable on and off cycle time from 1 second to 15 minutes with independent adjustments. It also meets all explosion proof requirements.

- No electrical circuits required
- No alternate air circuits required
- Completely automatic
