

Leaders in Separation Technology

P-Series

Destoners

Totally Enclosed Vacuum Destoners for a Completely Dust-Free Operation

The Forsberg P-Series Destoners are available in three different capacity sizes with numerous options available for individual customer requirements.

The destoner separates dry granular material into two specific weight fractions. This is done by a high speed eccentric deck motion and air being drawn through a pre-sized screen.

Forsberg Inc. has over 60 years experience in designing and manufacturing all types of processing equipment. Over these years, our marketing has geographically expanded to unlimited product categories worldwide.

***Right now Forsberg
P-Series Destoners are
working throughout the
world on:***

P-6 Destoner shown with optional rotary feed.
